Subject: Arc Ecology may petition EPA to list Treasure Island

I met with Saul Bloom today and he's really concerned about rad exposures to residents at Treasure Island, a non-NPL BRAC site. Since it was put on the BRAC list, DoD gave us some FTE to help the process along, but we've played a limited role and DTSC is the lead. As issues surrounding rad contamination and lack of characterization is getting more attention, and press, some residents are getting extremely concerned about radiation around them. Some rad devices have been discovered right outside people's doors. Saul does not feel like the State or the Navy are appropriately addressing the potential risk there, and tells me he plans on petitioning EPA in the coming weeks to evaluate and list the site. At the same time, he's pulling together a detailed analysis to support his assertion that EPA needs to step in. He realizes this is a complicated process and given the active State role, EPA may not deem it's necessary, and the Governor may not agree, but sounds like he's going to press us anyway.

Just a heads up for now,

John
